PRODUCT COLLABORATION

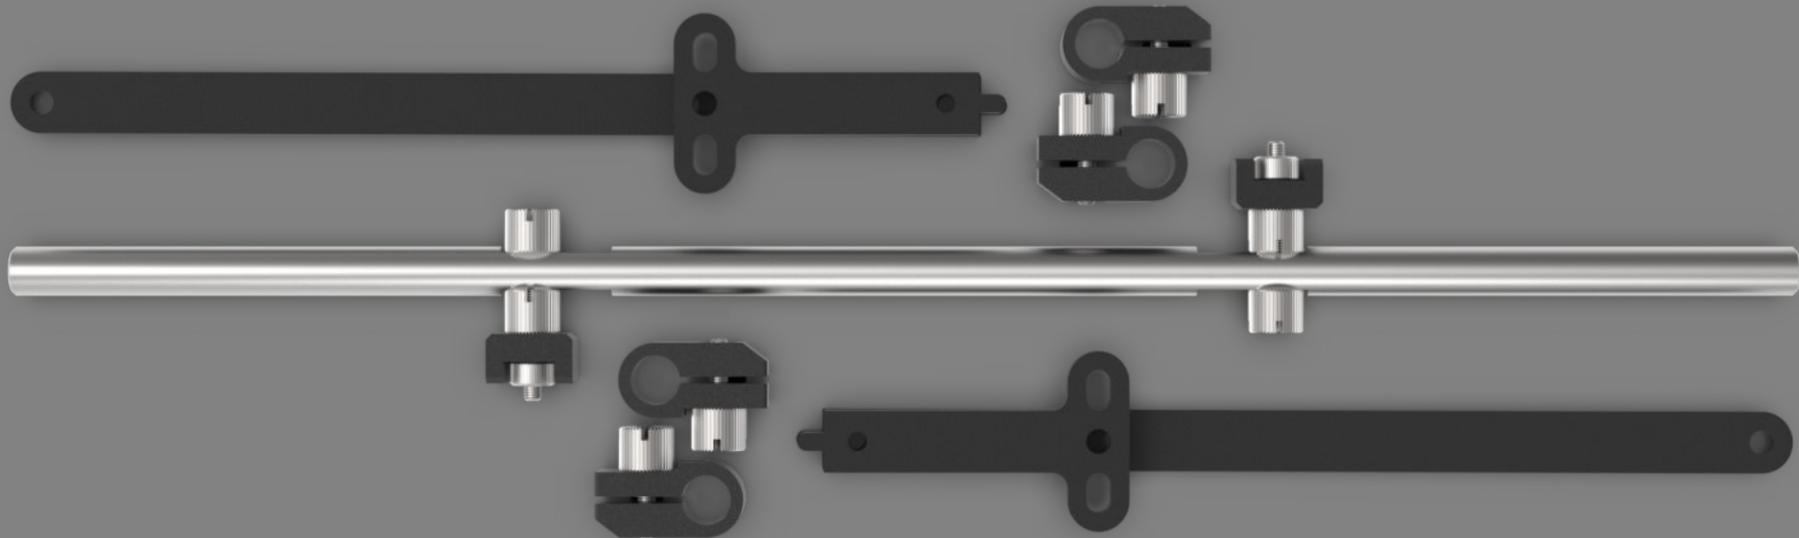

BC1 SMR : Introduction

Over a decade ago, the BC1 Open Benchtable launched with one clear goal: the ultimate portable platform for traveling overclocking enthusiasts. Its minimalist, toolless, flat pack design proved so effective that it quickly became the benchmark for open air builds, evolving from road warrior to permanent showcase platform for hobbyists and professionals alike.

Portability demanded compromises: slim profile, simple brackets, no native support for complete vertical builds.

Today we close those gaps and extend the BC1's legendary versatility without changing its core DNA. We are pleased to announce the SMR (Side Mounted Rail) kit, designed to unleash the full potential of the BC1 by bringing adding a more versatile and stable accessory mounting to the BC1.

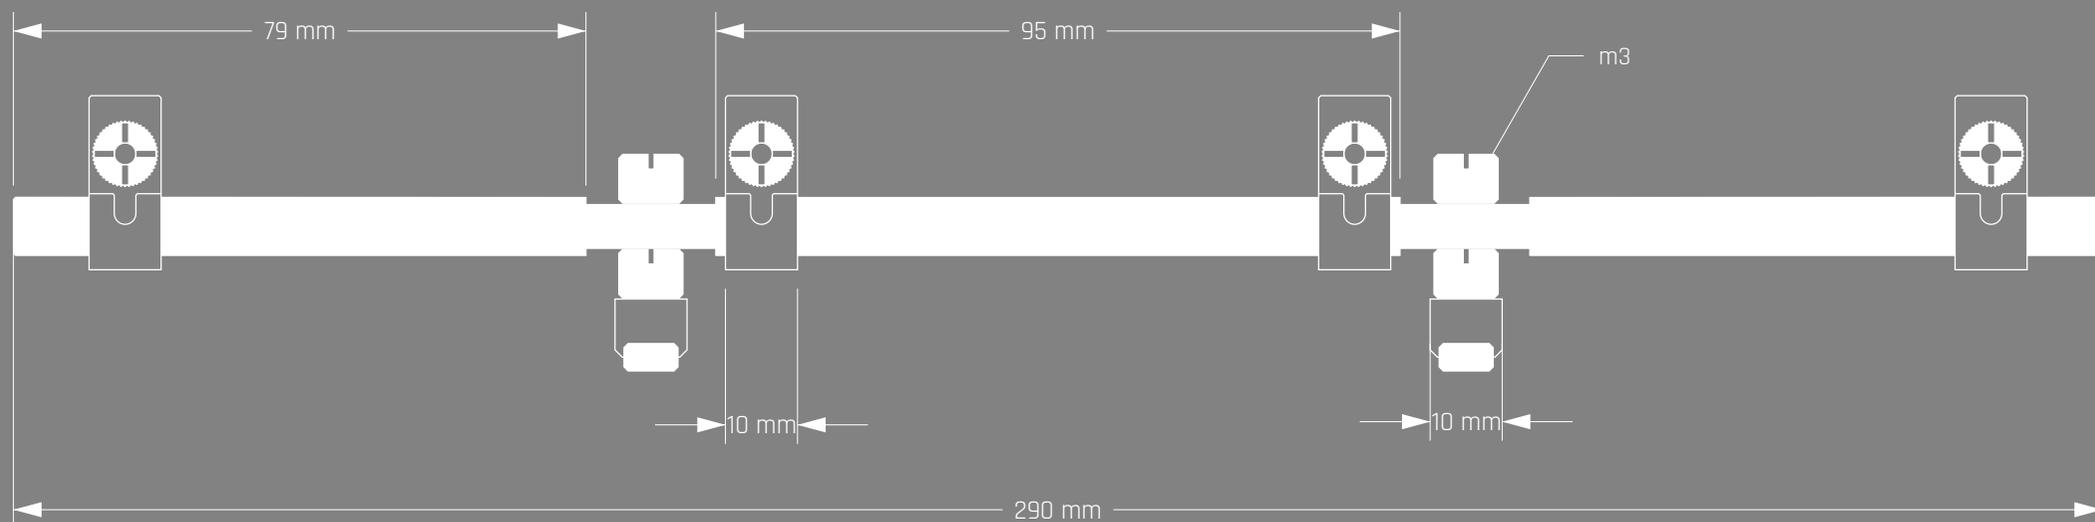

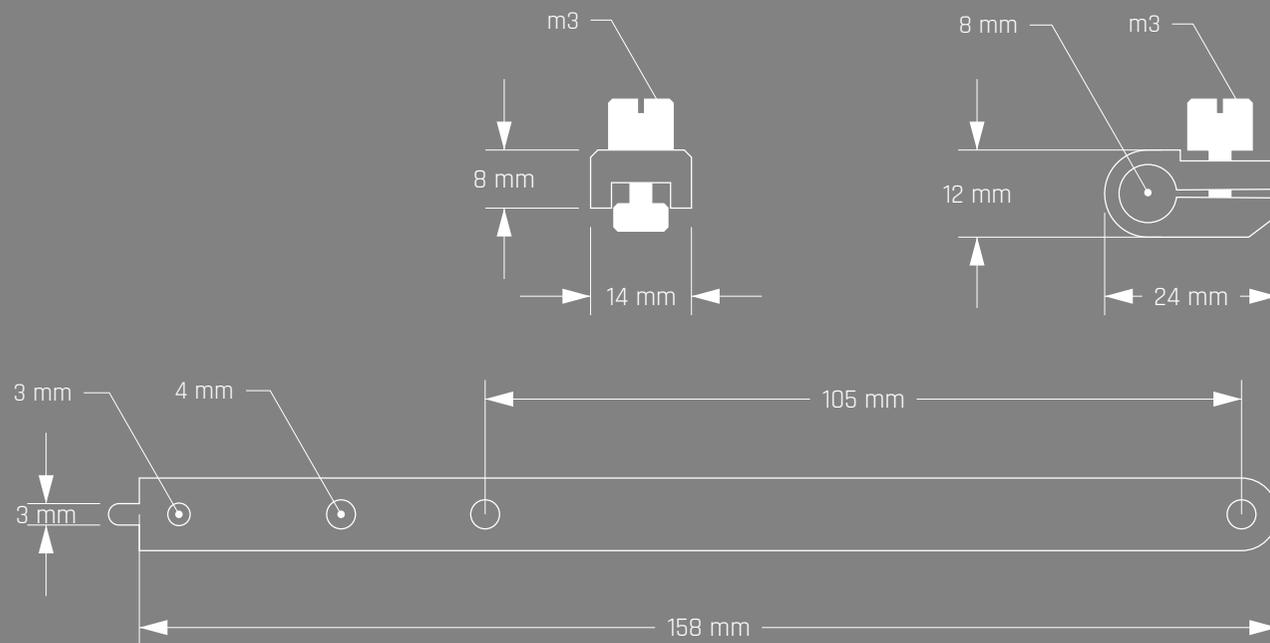

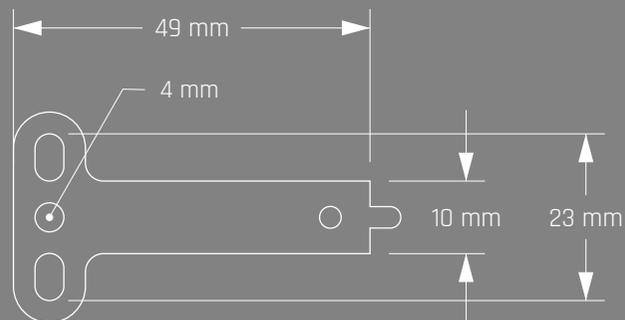

BC1 SMR : Specification

Specification:

- Packed Size: 270 x 80 x 8mm (W x D x H)
- Max Load: 8kg (with 4 brackets)
- Weight: 275g, with Packaging: 430g
- Colour Options: Single Colour, Black Brackets, Steel Rod & Screws
- Compatibility: BC1 V1, V2 and BC1 Mini
- Materials: AL6061, SS303

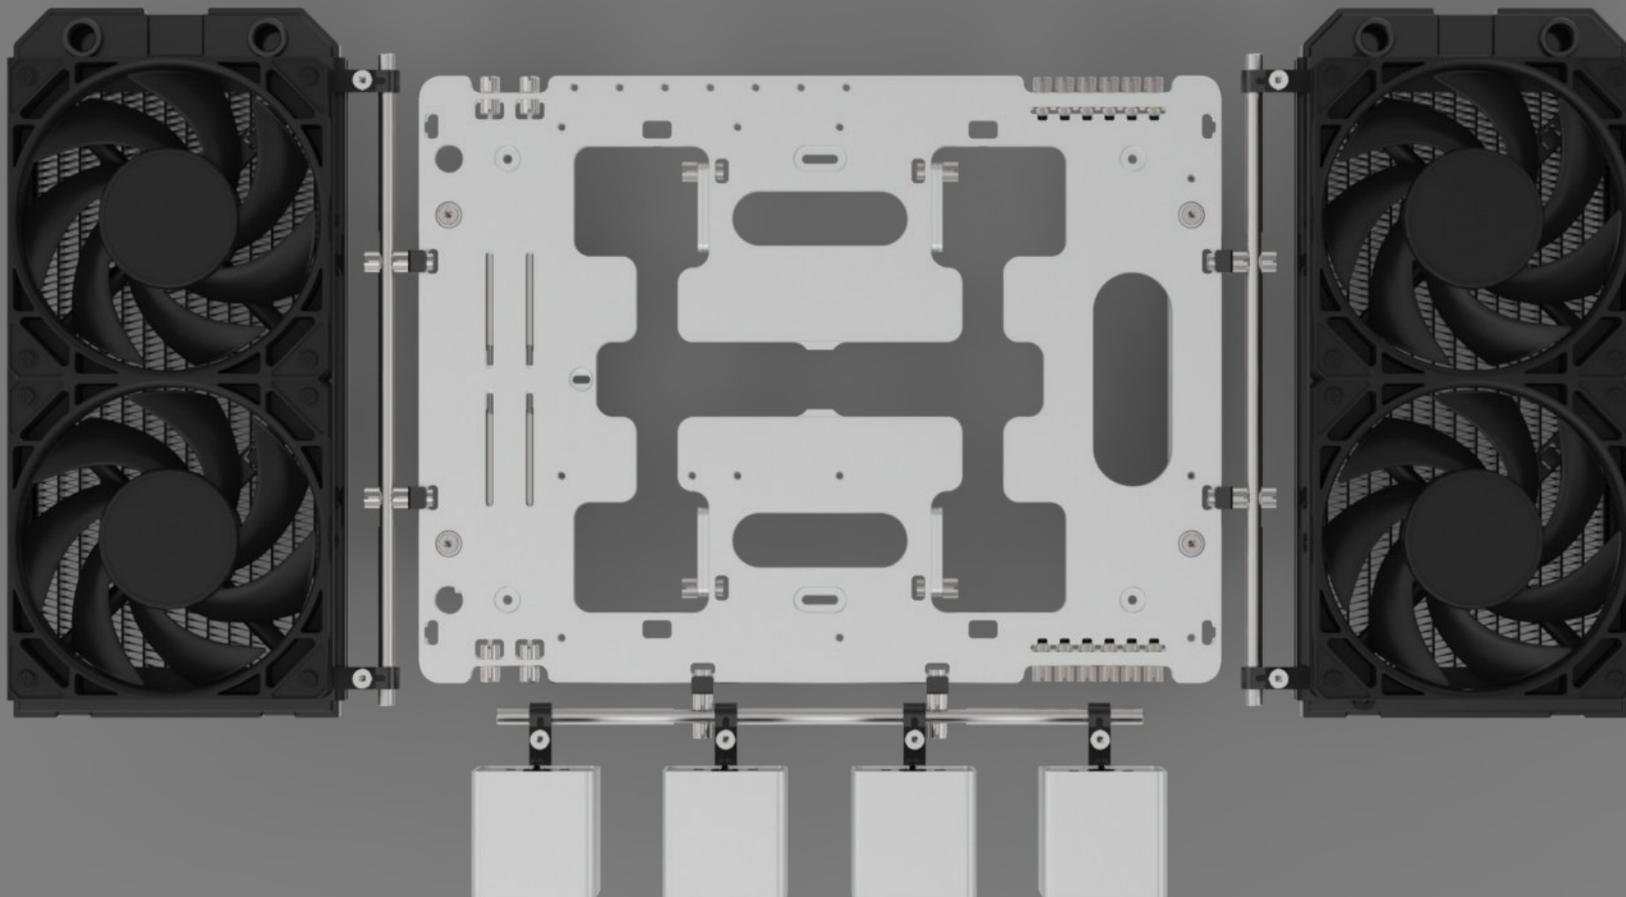

BC1 SMR : Expand

The BC1 has always featured mounting points along its edges (left, right and front) that when paired with the included brackets, allowed for fans, radiators and other hardware to be secured.

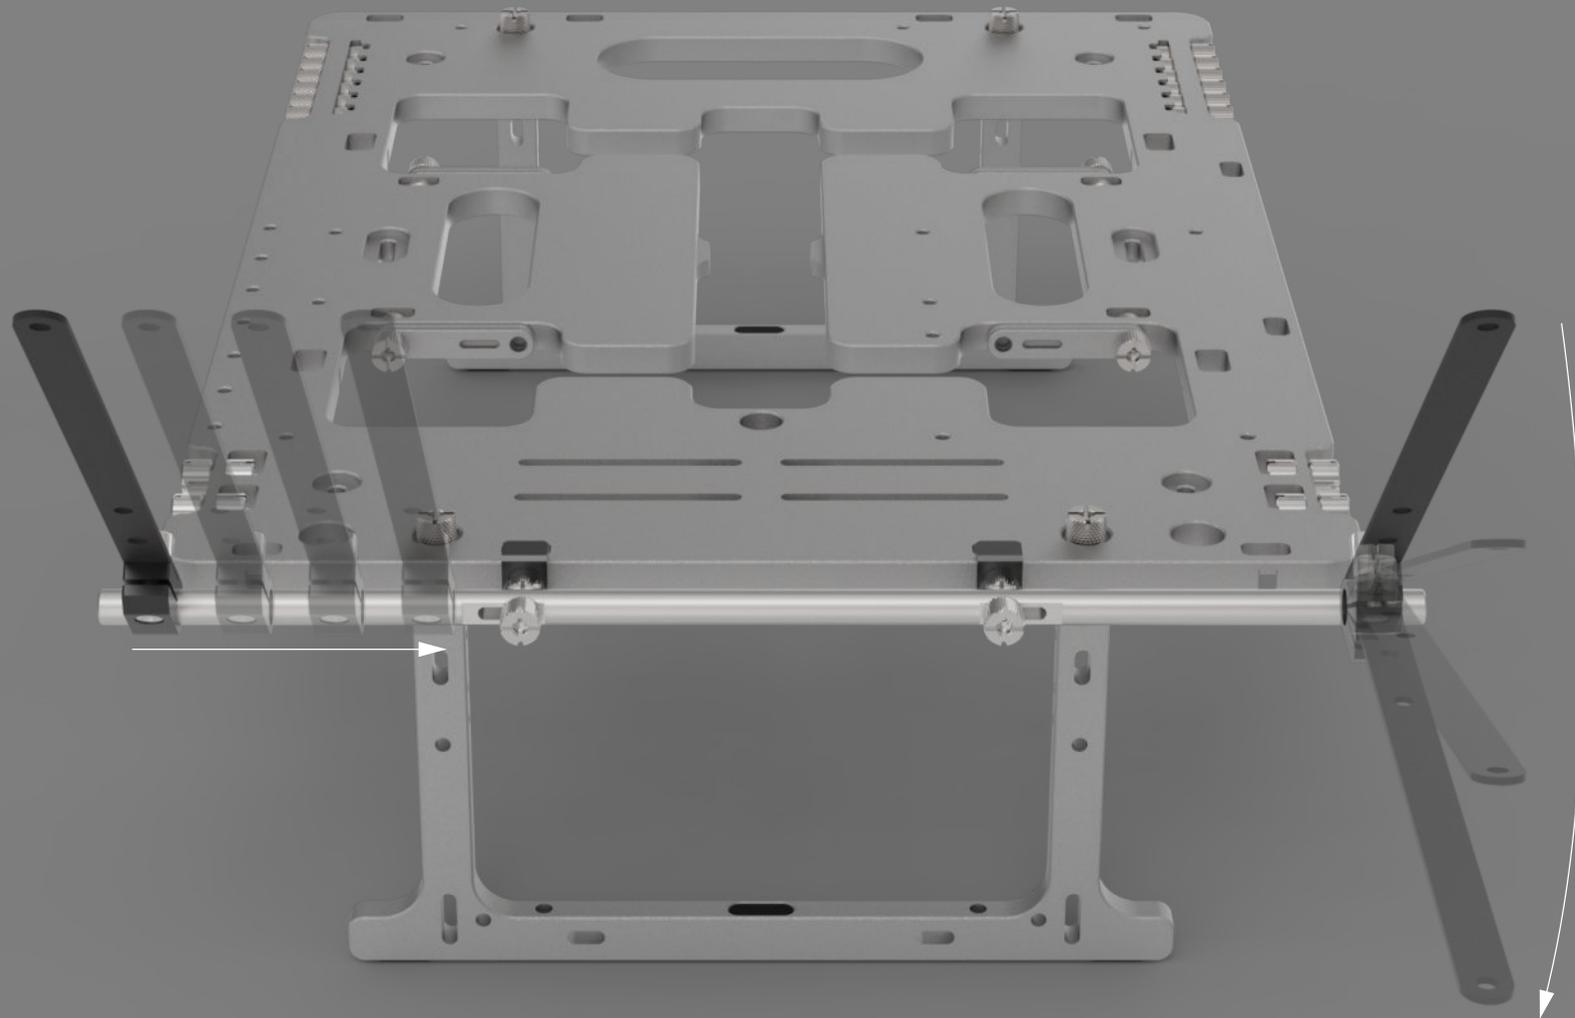

The SMR kit builds on this by attaching to those existing mounting points and providing a more versatile and robust solution for securing hardware to the BC1. It features a stainless steel rod and fully adjustable clamps that are highly adaptable. Two different bracket designs are included, a longer bracket for radiators and shorter bracket for fans, VU1 and other hardware.

BC1 SMR : Adjust

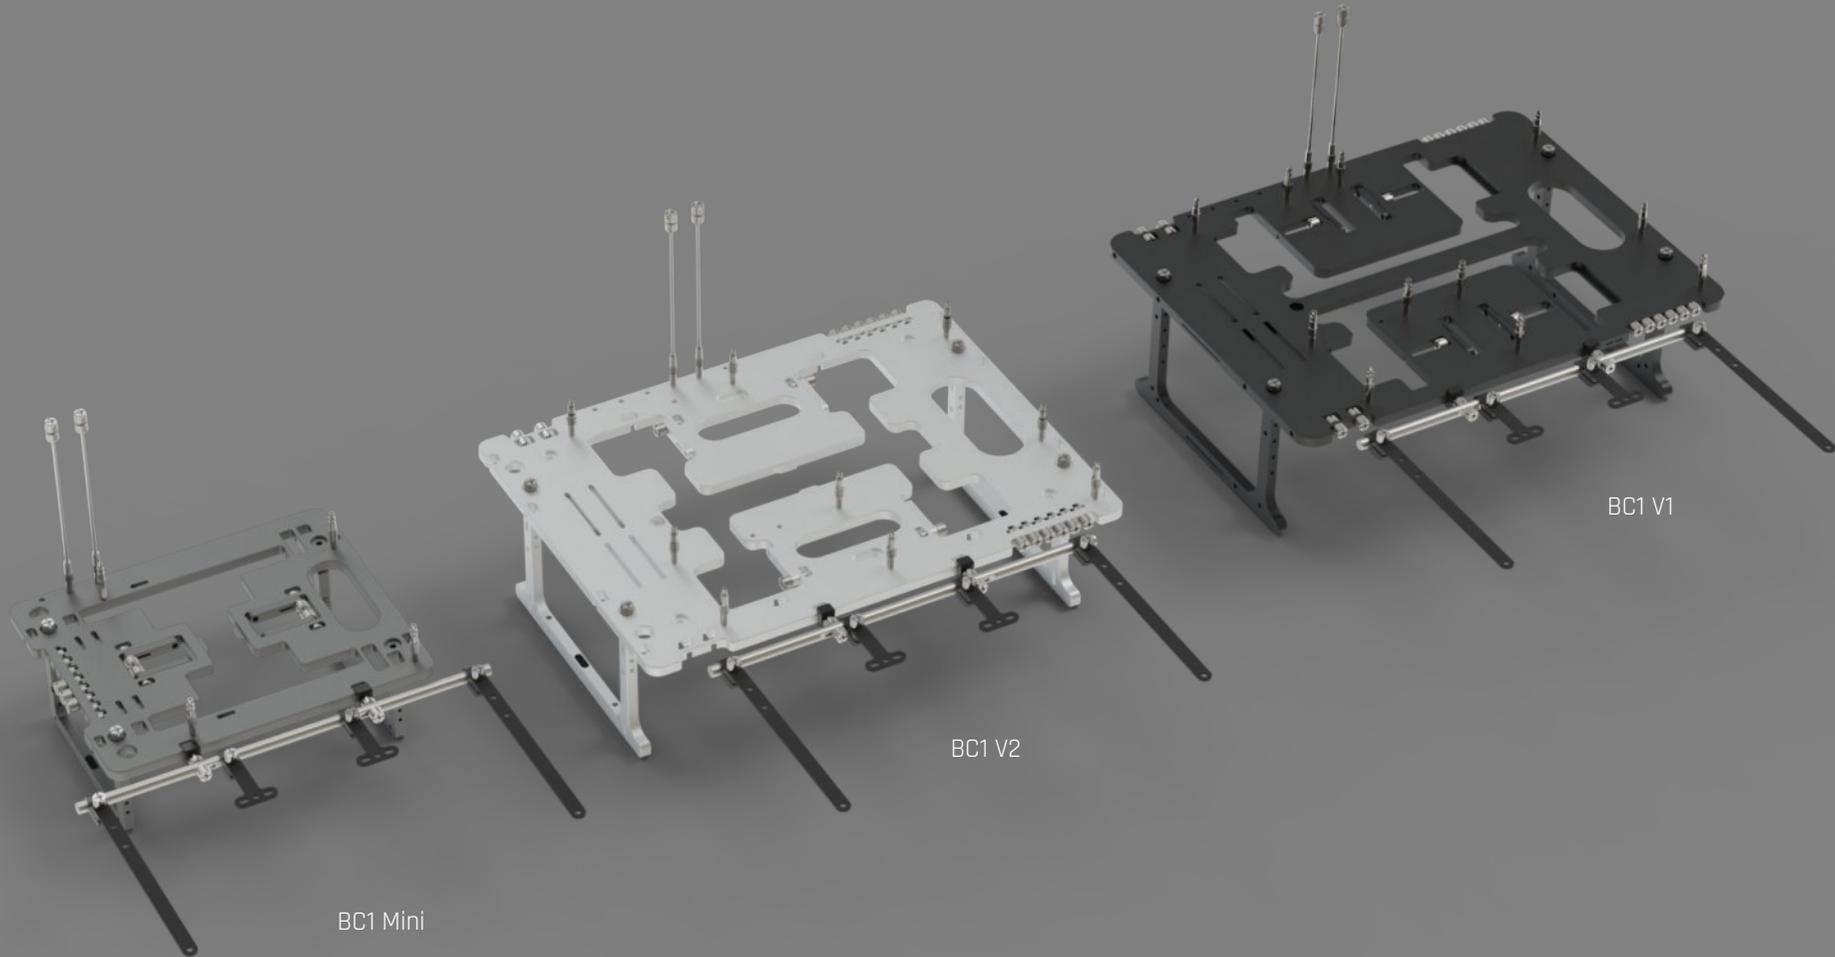

When unlocked, the clamps can slide and rotate freely along the rod providing granular adjustment to perfectly position hardware. The attachment to the BC1 edge also includes support brackets that help spread the load and allows for heavier items to be fitted and properly supported by the brackets.

BC1 SMR : Compatible

The SMR kit has been designed to be compatible with every generation and size (excluding the Pi) of BC1, so weather you have the original BC1 or the Mini, the SMR can be used to upgrade its functionality and support for more hardware.

BCI SMR : Customise

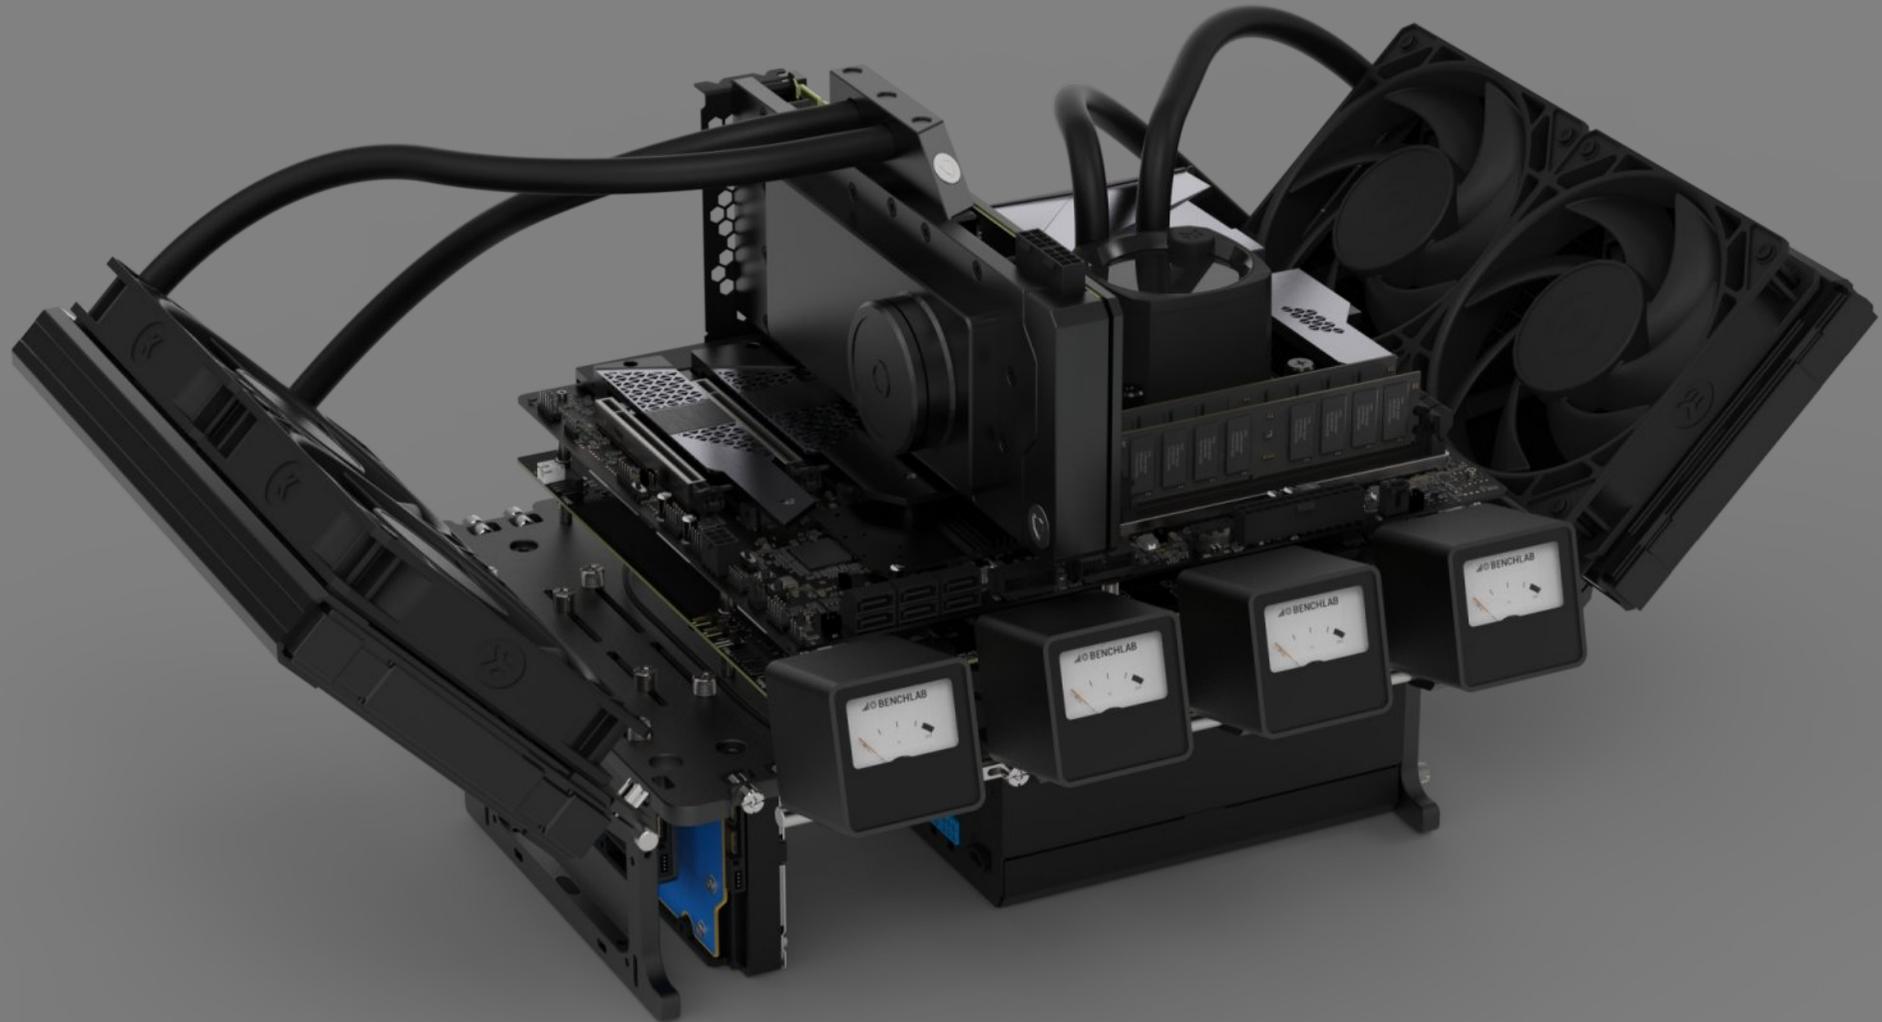

In keeping with the "maker" mindset of the Open Benchtable project, the SMR is optimised for custom bracket solutions. They feature an intentionally designed "flat profile" for easy replication. With the openly available templates and dimensions, users can quickly fabricate custom mounting hardware themselves or via third-party services.

BC1 SMR : Unique

The SMR kit joins the growing eco system of BC1 accessories that expand the functionality and compatibility. The SMR can also be attached directly to the newly released VGPU kit or used to mount the VU1s to display system telemetry. Together they allow you to build a truly unique open frame system.

BC1 SMR : Ordering, Availability & Pricing

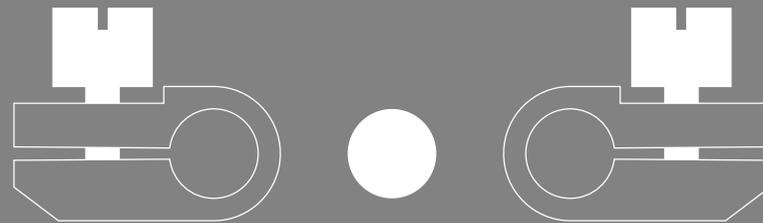

The BC1 SMR Kit is available in a single colour with an MSRP of 39,95EUR

Available for order on the day of release. For more details, visit openbenchtable.com and streakom.com.
